

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A method comprising:
  - defining a set of attributes associated with at least one resource;
  - associating a set of constraints with the attributes, the constraints corresponding to a context and being defined by a resource template;
  - determining that a resource matches the set of attributes and constraints;
  - and
  - displaying the resource as a selectable resource graphical object on a user device,

wherein the determining is performed in an enterprise management system that comprises cross-functional applications to manage the at least one resource, the cross-functional applications comprising:

  - a user interface for linking business objects of an object modeling tool with business workflow of a process modeling tool.
2. (Currently Amended) The method of claim 1, wherein defining the set of ~~attributers~~ attributes comprises:
  - receiving information that defines an object class of the at least one resource.
3. (Original) The method of claim 2, further comprising:

receiving information that defines an attribute associated with the object class.

4. (Original) The method of claim 2, wherein receiving information comprises:  
receiving information from a user device with a graphical display having an active area for the input of the information.
5. (Currently Amended) The method of claim 1, further ~~comprises~~ comprising:  
displaying a selectable template graphical object on a graphical display device prior to ~~[[the]]~~ determining that a resource matches, the template graphical object representing an active area associated with the defined resource.
6. (Original) The method of claim 1, wherein defining the set of attributes comprises:  
determining the set of attributes based on a profile of a user's interactions with at least one of a user device and an application.
7. (Currently Amended) The method of claim 1, further ~~comprises~~ comprising:  
receiving a selection of the ~~resources~~ resource template; and  
executing an application associated with the found resource.
8. (Original) The method of claim 7, wherein executing an application comprises executing the application within a guided procedure workflow.

9. (Currently Amended) The method of claim 1, wherein the resource ~~comprise~~ comprises at least one of an executable application, a datum and a web-page.
10. (Currently Amended) An article comprising a machine-readable medium including machine-executable instructions operative to cause a machine to:
- define a set of attributes associated with at least one resource;
  - associate a set of constraints with the attributes, the constraints corresponding to a context and being defined by a resource template;
  - determine that a resource matches the set of attributes and constraints;
  - and
  - display the resource as a selectable resource graphical object on a user device,
- wherein the instructions to determine are performed in an enterprise management system that comprises cross-functional applications to manage the at least one resource, the cross-functional applications comprising:
- a user interface for linking business objects of an object modeling tool with business workflow of a process modeling tool.
11. (Currently Amended) The article of claim 10, wherein instructions operative to cause a machine to define the set of attributes ~~comprises~~ comprise instructions operative to cause a machine to:

receive information that defines an object class of the at least one resource.

12. (Previously Presented) The article of claim 11, further comprising instructions operative to cause a machine to:

receive information that defines an attribute associated with the object class.

13. (Currently Amended) The article of claim 11, wherein instructions operative to cause a machine to receive information ~~comprises~~ comprise instructions operative to cause a machine to:

receive information from a user device with a graphical display having an active area for the input of the information.

14. (Currently Amended) The article of claim 10, further ~~comprises~~ comprising instructions operative to cause a machine to:

display a selectable template graphical object on a graphical display ~~device~~ device prior to determining that a resource matches, the template graphical object representing an active area associated with the defined resource.

15. (Currently Amended) The article of claim 10, wherein instructions operative to cause a machine to define the set of attributes ~~comprises~~ comprise instructions operative to cause a machine to:

determine the set of attributes based on a profile of a user's interactions with at least one of a user device and an application.

16. (Currently Amended) The article of claim 10, further ~~comprises~~ comprising instructions operative to cause a machine to:
- receive a selection of the resource template; and
  - execute an application associated with the found resource.
17. (Currently Amended) The article of claim 16, wherein instructions operative to cause a machine to execute an application ~~comprises~~ comprise instructions operative to cause a machine to execute the application within a guided workflow.
18. (Original) The article of claim 10, wherein the resource comprises at least one of an executable application, a datum and a web-page.
19. (New) A method of locating at least one resource for completing a process comprising:
- (a) describing the process for completion in terms of phases, flow blocks, and steps of a process flow;
  - (b) defining a resource template comprising:
    - defining design time search criteria; and
    - defining a run time,wherein defining design time search criteria comprises:
    - defining a type of resource by including an object class definition;

defining a set of attributes of the object class;  
and

associating a set of constraints with the  
attributes,

wherein the associated constraints are relative  
to a context of the process;

- (c) searching, during the defined runtime, for at least one resource using the resource template as a step in a guided procedure of a resource finder application, wherein the guided procedure includes a context awareness feature that automates process steps;
- (d) determining if at least one resource found by the resource finder application matches the defined attributes and associated constraints of the resource template;
- (e) performing at least one of reporting or displaying the found at least one resource to a user based on the determining step; and
- (f) repeating steps (b) to (e) until at least one resource is found suitable for completing the process.

20. (New) The method of claim 19, further comprising:

determining the context by determining a business object utilized by a user.

21. (New) The method of claim 19, wherein:

the phases define a sub-structure of the flow and comprise flow blocks and steps;

the flow blocks comprise steps that are executed in one of in sequence or  
in parallel; and

the steps are assigned respective actions.

22. (New) The method of claim 19, wherein the flow blocks define alternative steps that lead to a dynamic choice at run time.
23. (New) The method of claim 19, further comprising:  
linking the process flow to the context of the process through a defined action,  
wherein the action is defined through at least one of a workflow pattern, an application/service link, a context-aware list of deliverables, a list of contributors or a list of primary objects.
24. (New) The method of claim 19, wherein the reporting or displaying occurs based upon at least one of a complete match and a partial match.
25. (New) The method of claim 19, comprising:  
representing the resource template as a selectable template graphical object;  
displaying the selectable template graphical object on a graphical display device prior to determining that a resource matches, the template graphical object representing an active area associated with the defined resource;  
activating the template graphical object; and

launching, based on the activating, a resource finder application that uses  
the resource template as a step in a guided procedure of the  
resource finder application,  
wherein the guided procedure comprises a context awareness feature for  
automating process steps.
